

January 24, 2009 the board of directors of the North Carolina Angus Association adopted a resolution stating that all cattle consigned to North Carolina Angus Association sponsored sales must be identified as Arthrogryposis Multiplex Free (AMF). The board amended that resolution July 25, 2010, to read, "all *registered* Angus". On October 24, 2010 the resolution was amended to include all genetic defects and now reads:

*Association Sponsored Sale are Arthrogryposis Multiplex, Neuropathic Hydrocephalus, and Contractural Arachnodactyly Free*

Effective January 1, 2011, all registered Angus cattle consigned to North Carolina Angus Association (NCAA) sponsored sale must be identified as Arthrogryposis Multiplex Free (AMF), Neuropathic Hydrocephalus Free (NHF) and Contractural Arachnodactyly Free (CAF) by the American Angus Association. For the purposes of this requirement, animals must be identified as *AMF*, *NHF*, and *CAF* or identified as "No Carrier Ancestor" by the American Angus Association. It is the responsibility of the consigner to provide documentation to support these requirements. This requirement included both live animals and unborn calves. In the case of an unborn calf, both the dam and sire must meet these requirements.
